

Flow chart for using Kyber

Corey Clatterbuck, with contributions from Anna Holder

[Kyber](#) is an R package (and incredible tool) for reusing [Openscapes](#) cohort design & logistical materials. However, to folks less familiar with GitHub and R setup and requirements, implementing Kyber can be confusing. This flow chart aims to define the workflow for setting up an Openscapes cohort using Kyber, include requirements for each step in the workflow, and provide documentation of potential roadblocks. Users should begin their workflow at one of the circled steps, which are numbered in order according to dependencies & the Champions Program setup timeline outlined in the [Openscapes Approach Guide](#).

Many thanks to Sean Kross, Julie Lowndes, and Stefanie Butland for creating, maintaining, and contributing to this package. This chart is version-controlled in the [swrcb-openscapes repo](#).
